PRODUCT DESCRIPTION

CCTV Security System ->

CCTV (closed-circuit television) is a TV system in which signals are not publicly distributed but are monitored, primarily for surveillance and security purposes.

Bio-metric Access and Time Attendance System ->

Biometrics are being used to establish better and accessible records of the hours employee's work. With the increase in "Buddy Punching a case where employees clocked out coworkers and fraudulently inflated their work hours) employers have looked towards new technology like fingerprint recognition to reduce such fraud. Additionally, employers are also faced with the task of proper collection of data such as entry and exit times. Biometric devices make for largely fool proof and reliable ways of enabling to collect data as employees have to be present to enter biometric details which are unique to them.

Fire Alarm System ->

A fire alarm system is number of devices working together to detect and warn people through visual and audio appliances when smoke, fire, carbon monoxide or other emergencies are present. These alarms may be activated from smoke detectors, and heat detectors. Alarms can be either motorized bells or wall mountable sounders or horns. They can also be speaker strobes which sound an alarm, followed by a voice evacuation message which usually state in the lines of "Attention, Attention. A fire emergency has been reported. Please leave the building via the nearest exit.

PA System ->

A public address system (PA system) is an electronic sound amplification and distribution system with a microphone, amplifier and loudspeakers, used to allow a person to address a large public, for example for announcements of movements at large and noisy air and rail terminals or at a sports stadium. The term is also used for systems which may additionally have a mixing console, and amplifiers and loudspeakers suitable for music as well as speech, used to reinforce a sound source, such as recorded music or a person giving a speech or distributing the sound throughout a venue or building.

PRODUCT DESCRIPTION

Intrusion Alarm System ->

A security alarm is a system designed to detect intrusion – unauthorized entry – into a building or area. Security alarms are used in residential, commercial, industrial, and military properties for protection against burglary (theft) or property damage, as well as personal protection against intruders.

Door Interlock System ->

The access to the production area and storage area in pharmaceutical industries is through the air lock / change room. Differential level of positive pressure is maintained in the lock / change room, air lock / change room to minimize microbiological and particulate contamination. The good manufacturing practice guidelines of various agencies around the world suggest only one door be opened at one time, either by procedure or by providing a Door Interlocking System. The procedure calls for dependence on manpower and it is difficult to ensure that the procedure is followed. An Electronic Door Interlock system to prevent simultaneous opening of both the doors can be considered

AMC ->

Annual Maintenance Contract in short AMC is a service provided by companies to customers at a cost that half keep their product in proper working condition after free product service offered by the company are completed. Annual maintenance contract signed between a customer and product manufacturer/service center allows regular the performance and quality of the product in good condition every year.

Types of AMC

- 1. Non Comprehensive Annual maintenance contract**
- 2. Comprehensive Annual maintenance contract**

Thank you
